

WHAT IS CLAIMED IS:

1. A method for managing documents for printing in a document management system comprising:
 identifying pages within a document with a naming convention; and
 specifying exception parameters for the identified pages.
2. The method of claim 1, the identification of pages further comprising:
 entering an imposition scheme for the document.
3. The method of claim 2, the identification of pages further comprising:
 entering a page designation.
4. The method of claim 3, the page designation further comprising:
 designating pages with numerals; and
 separating the numerals with white space characters.
5. The method of claim 4, the page numeral entry further comprising:
 separating the page numerals with a range indicator.
6. The method of claim 5, the page identification further comprising:
 entering an even/odd designation for the page range indicated by
 the page numerals and range indicator.

7. The method of claim 1, the exception parameter specification further comprising:
 - specifying a device color profile for the identified pages.
8. The method of claim 1, the exception parameter specification further comprising:
 - specifying a trapping parameter for the identified pages.
9. The method of claim 1, the exception parameter specification further comprising:
 - specifying black overprinting parameters for the identified pages.
10. The method of claim 1, the exception parameter specification further comprising:
 - specifying anti-aliasing parameters for the identified pages.
11. The method of claim 1, the the page identification further comprising:
 - including an imposition template identifier in the naming convention.

12.A system for managing documents for printing in a document management system comprising:

an exception page selector for identifying pages within a document with a naming convention; and

an exception programmer for specifying exception parameters for the identified pages.

13. The system of claim 12, the exception page selector including:

an input window for entering the naming convention.

14. The system of claim 12, the naming convention including:

an even/odd designator for the identified pages of the document.

15. The system of claim 12, the naming convention including:

an imposition template identifier.

16. The system of claim 12, the naming convention including:

page numerals separated by a range indicator.

17. The system of claim 16, the naming convention including:

an even/odd designator for the identified pages in the range.

18. The system of claim 12, the exception programmer further comprising:
a device color profile parameter that is correlated with the identified pages.
19. The system of claim 12, the exception programmer further comprising:
a trapping parameter that is correlated with the identified pages.
20. The system of claim 12, the exception programmer further comprising:
one of a black overprinting parameter and an anti-aliasing parameter that is correlated with the identified pages.
